Welcome from the President of the Third International Conference of Hypertension

Dr. Hind Mamoun Beheiry
Assistant Professor of Physiology; Acting Dean of the Faculty of Medicine and Dean of the Faculty of Nursing Sciences at the International University of Africa

Ladies and Gentlemen, fellow colleagues and distinguished guests,

السلام عليكم ورحمة الله وبركاته

May the peace, mercy and blessings of God be upon you

On this Third International Conference of Hypertension in Sudan 2017, I am tremendously honored to address the distinguished attending audience as President of the conference.
Hypertension, the silent killer, remains a significant challenge which demands a collaborative international, global effort in order to reduce its incidence, and work to improve methods of its control and management.
Focusing on the theme of “Hypertension: New Trends and Challenges,” this conference will build on the platform founded by the Sudanese Society of Hypertension (SSH). It shall henceforth scrutinize and propose solutions for the Hypertension-related medical and health, social and community problems, in the local, regional and international spheres.

We call upon and urge the participants to emphasize the need for the pooling and synchronization of efforts. This is especially relevant to information sharing in relation to, first, molecular and pathophysiological factors among and linked to different racial backgrounds; second, environmental and lifestyle concerns which inflict genetic mutations and third, management-related matters including pharmaceutical advancements in the battle against hypertension.
Finally, I would like to express my sincere gratitude to the umbrella organization that is the ISH which brings us together; and to Professor Neil
Poulter and his executive committee for their continued support and efforts. I wish you all a valuable, informative and constructive program and do not forget to enjoy the company and hospitality. Welcome to Sudan.

Yours sincerely,

Dr. Hind Mamoun Beheiry
Conference President
